

HAIR RESTORATION

NON-SURGICAL | ALL NATURAL | NO DOWNTIME | COST EFFECTIVE

In the past, long-term hair restoration treatments required surgery. These days regenerative medical therapies that use PRP (Platelet-Rich Plasma) and Exosomes, offer excellent results with less downtime and pain and provide more natural-looking results.

- **Slow down, halt, or reverse follicular reduction**
- **Increase the caliber of existing hair**
- **Repair broken or damaged hair**
- **Increase blood supply to the follicle**
- **Improve overall hair health**
- **More cost-effective compared to hair transplants**

PRP AND EXOSOME HAIR RESTORATION - HOW DOES IT WORK?

The patient's scalp is first treated with Sylfirm X Microneedling RF. This procedure creates small wounds at a depth of 0.8mm to reach hair follicles. Patients can then choose to utilize PRP or Exosome treatment.

PRP (Platelet-Rich Plasma) Treatment involves drawing the patient's blood, processing it in an Emcyte centrifuge to separate PRP, and then applying it to the scalp after treating it with Sylfirm X Microneedling RF. Using the patient's growth factors, PRP aims to regrow hair, strengthen existing hair, prevent hair loss, and promote scalp health.

Exoqore XH (Exosome Treatment) is a groundbreaking treatment that harnesses the power of exosomes, tiny extracellular vesicles derived from your body. These exosomes play a pivotal role in cell communication, facilitating the transfer of growth factors and proteins that stimulate hair follicle regeneration. Our advanced formula, carefully crafted for optimal results, is designed to address the root causes of hair loss.

WHEN WILL I SEE RESULTS? HOW MANY TREATMENTS DO I NEED?

Treatment effects are visible as early as 2 months after treatment.

Typically, the number of treatment sessions ranges from 4-8 treatments. Your medical provider will discuss your customized treatment plan at your consultation.
