Add Under-Eye Exosome Injections  
for ½ price: \$1450

- ✓ Minimally-invasive
- ✓ No downtime
- ✓ Safe for all skin types
- ✓ Comfortable & quick

## PRP & EXOSOMES

**PRP** involves drawing a small amount of your blood, spinning it in a centrifuge to isolate the growth-factor-rich plasma, and then applying it to targeted areas. This treatment boosts collagen production, accelerates cell turnover, and improves skin tone and texture.

**Exosomes** are even more advanced. Secreted by stem cells, exosomes contain powerful proteins and growth factors that support cellular communication and skin regeneration. When injected or applied topically, exosomes can help repair damaged tissue, reduce inflammation, and stimulate collagen and elastin production for smoother, firmer, more youthful-looking skin.

These treatments are minimally invasive, with no downtime, and are safe for all skin types. They're ideal for patients seeking a natural and effective way to rejuvenate the skin.

### Exosomes - Undereye

This natural treatment is designed to reduce dark circles, fine lines, puffiness, and hollowness under the eyes. Exosomes stimulate collagen production and can improve skin quality, offering an effective way to rejuvenate the delicate under-eye area.

### EXOSOME INJECTIONS (UNDER EYE ONLY)

\$2900 per treatment
