

PEPTIDES

The Wellness Boost You Didn't Know You Needed

AGING MIGHT BE INEVITABLE

but feeling sluggish, burned out, or worn down doesn't have to be. At Renew Specialty Group in Cornelius, the focus isn't just on adding years to your life; it's about adding vibrance to every year. Enter peptide therapy: a modern, science-backed way to help you look and feel your best from the inside out.

So, what exactly are peptides? Picture them as tiny messengers that tell your body to heal, regenerate, and thrive. They're naturally occurring amino acid chains already in your system, but when precisely delivered through targeted therapy, they can supercharge everything from skin rejuvenation to muscle repair and mental clarity.

At Renew, peptide therapy isn't one-size-fits-all—it's personalized based on your unique goals and wellness journey. Here's a glimpse at some of the most sought-after options:

DR. CORAL KIRSCHER, DNP, FNP-C & DR. MICAH KIRSCHER, DNP, FNP-C

Curious about which peptide could transform the way you feel? Visit renewhealthwellnessnc.com to learn more or schedule a consultation.

NAD+

NAD+ is a powerhouse molecule that fuels every cell in your body—but levels decline with age, leading to fatigue, brain fog, and slower metabolism. Supplementing with NAD+ can boost energy, clarity, mood, and support weight loss.

NAD+ is a game-changer for anyone looking to feel younger from the inside out.

While oral and nasal forms exist, injections are far more effective. They bypass digestion and go straight to the bloodstream—so your body can actually reap the full benefits.

TB500

Known for its regenerative potential, TB500 can support flexibility, reduce inflammation, and assist in the body's natural healing response, particularly for those managing injuries or seeking performance optimization.

CJC-1295 / Ipamorelin

These peptides are designed to gently encourage growth hormone release. They are commonly used to help promote muscle tone, enhance metabolic support, and assist with sustainable weight management.

Beauty Peptide

Tri-Mix of BPC-157, Copper Peptide, TB500

This blend is often used to encourage skin renewal, reduce the appearance of scars, support healthy hair growth, enhance gut function, and aid in muscle recovery after physical activity.

BPC-157

Often referred to as the "body protection compound," BPC-157 is commonly used to support healing and tissue repair. It can help promote gut integrity, soft tissue recovery, and overall resilience (frequently favored by athletes and active individuals).

Sermorelin

This peptide stimulates the body's natural production of growth hormone. It's often utilized to assist with muscle development, fat metabolism, recovery, and improved sleep.

Oxytocin, Kisspeptin & DSIP

Anti-aging isn't just about appearance. These peptides can support emotional wellness, intimacy, hormone balance, and restful sleep.

FURTHER YOUR WELLNESS

Renew Specialty Group offers customized peptide stacking which carefully combines select peptides to amplify results. Whether it's boosting energy while supporting skin health, or enhancing recovery while improving mood, stacking allows for a holistic, synergistic approach tailored just for you.
